Dear [redacted], Gardner 7/6/64

I've mailed the enclosed paper up to show you that we again check -- that the FBI deliberately did not do and did not include any quantitative analysis on the JFK evidence. It was no habit and it had been long for years. In this instance, the effort of the FBI to kill the spy and by claiming ambiguity about whether or not it could be done that is destroyed by the 7/22/64 memo which says they are doing a quantitative one with the Ryder evidence.

Realize that this was done, remember not done, before Oswald was killed or then a trial was completed.

If you have any questions, please ask.

There is much more that they didn't do that they could and should have.

Best,
